Election to NSSA Fellowship recognizes outstanding contributions to neutron scattering and the North American neutron scattering community.

The Neutron Scattering Society of America is pleased to announce the 2022 recipients of its four major prizes.

Conference Room 235

CLIFFORD G. SHULL PRIZE

The Clifford G. Shull Prize in Neutron Science recognize outstanding research in neutron science and leadership promoting the North America neutron scattering community. The prize is named in honor of Clifford G. Shull, who received the Nobel Prize in 1994 for seminal developments in the field of neutron science.

Dan A. Neumann
NIST Center for Neutron Research

“For outstanding contributions, leadership, and vision to the neutron scattering community as scientist, mentor, instrument developer, and facility steward.”

Dan A. Neumann is the Leader of the Neutron Condensed Matter Science Group at the NIST Center for Neutron Research (NCNR). He has spent most of his career shaping the NCNR scientific program and developing the NCNR into one of the world’s foremost neutron research facilities. His stewardship of the NCNR is marked by his successes in recruiting and mentoring talented scientists, identifying and constructing world-class neutron instrumentation and forging novel partnerships to leverage NCNR resources and produce the greatest possible scientific output.

Neumann possesses a profound understanding of neutron instrumentation, and he has been unafraid to implement cutting-edge neutron optical concepts. While leading the development of the first backscattering spectrometer in North America, he decided to incorporate a novel phase-space-transform chopper that had never been built before. His efforts succeeded, increasing the flux on sample by over a factor of four, and have since been replicated at the Institut Laue-Langevin (ILL) and Heinz Maier-Leibnitz Zentrum (MLZ).

Neumann provided the scientific leadership for the expansion of the NCNR by crafting the entire instrument layout for the second guide hall, overseeing the design, construction and installation of new instruments, and reconfiguring several instruments in both the new and old guide halls to provide future instrumentation opportunities. The recently commissioned vSANS and CANDOR instruments were made possible by his carefully planned instrument layout. More recently, Neumann planned the upgrades of three of the original neutron guides and modernized the neutron optics of the instruments on these guides, which will significantly increase their performance.

Neumann has greatly expanded the U.S. neutron scattering community through the development of a variety of industrial and academic partnerships. This has been most evident through his stewardship and expansion of the joint NSF/NIST-funded Center for High Resolution Neutron Scattering (CHRNS). He was also a co-founder, with Ron Jones and Eric Lin, of the *n*Soft industrial consortium that has established a new model for fostering industrial interactions at national user facilities. Along with Norman Wagner, Neumann co-founded the Center for Neutron Scattering at the University of Delaware. This collaboration has attracted funding for a new spin-echo instrument as well as industry fund x-raying for several projects.

Due to the success of the NCNR scientific program, Neumann is one of the most highly sought scientists by facilities seeking advice on sources and instrumentation as well as reviews of existing neutron science programs. Over the past 20 years Neumann has served on 50 advisory and/or review committees for various neutron and x-ray sources worldwide.

Neumann was first introduced to neutron scattering techniques in 1983 while a graduate student at the University of Illinois at Urbana-Champaign. After receiving his PhD degree in 1987, he was hired as a staff scientist at the National Bureau of Standards Reactor Radiation Division, now the NIST Center for Neutron Research. In 1997, he was named Leader of the Chemical Physics team, which operated the NCNR neutron spectroscopy program. In 2005, he succeeded Jack Rush as Leader of the Neutron Condensed Matter Science Group. Neumann is a Fellow of the NSSA and the American Physical Society.

An introduction to quasielastic neutron scattering using neutron spin echo will be followed by several scientific examples in complex systems, incoherent scattering materials and magnetism. The workshop will end with talks and discussions about ongoing upgrades to the NSE instrumentation at the U.S. facilities. It is hoped that participants will get a better understanding of this polarized neutron technique, the complex instrumentation and the science that results from this technique.

Analyzing Small-Angle Scattering Data with Modern Python

Sunday, 9:00 am – 5:00 pm

While there exists a plethora of tools for analyzing X-ray and neutron scattering data, it is sometimes the case that these tools do not have all the features needed to support highly specialized experiments. In this case, users must either wait for the developers to add in the features or attempt to add the features themselves. However, both options can unnecessarily slow down progress of their scientific program. Here, we will teach participants how to use the Python programming language to analyze their scattering data and develop custom analysis workflows. We will start with the basics of Python itself and then continue building upon skills for loading, plotting and analysis using real-world data. Finally, provided examples will demonstrate how several Python libraries, including both general-purpose (Pandas, xArray) and specialized (sasmodels, periodictable, pyPRISM) tools, can be incorporated in these custom data approaches.

USER GROUP MEETINGS

UMC West Ballroom 208

Monday, June 6

12:30 pm – 1:30 pm

DEI Discussion

Panel Discussion: Barriers to Access for Neutron Science

Facility science has traditionally been done by those who are able and willing to travel, presenting challenges for many potential users. The COVID-19 pandemic has shed new light on the possibilities for conducting experiments remotely. This panel discussion will focus on the challenges and opportunities of remote experiments and making access to neutron beam time more equitable and inclusive.

Tuesday, June 7

12:30 pm – 1:30 pm

NUG Meeting

The NCNR User Group (NUG) and NCNR staff members will provide updates regarding the status of the NBS reactor, new instruments and initiatives at the NCNR, as well as a summary of recent NUG activities.

3:45 pm – 4:45 pm

Breakout Session: How do we improve the UX of ORNL neutron data systems?

Users of ORNL neutron sources spend significant time interacting with data. These interactions span the full workflow from proposal submission, experiment planning and data reduction, and extend beyond this into analysis and publication. Together, these comprise the holistic User Experience (UX) of ORNL neutron data systems.

Many of the systems used today evolved organically and independently of each other. Consequently, there are a broad distribution of approaches, software architectures and philosophies within ORNL neutron sciences (sometimes even within a single beamline). We believe there is significant scope to improve this experience, maximizing accessibility, usability and efficiency of the data cycle.

Join us for this interactive breakout session to share your experiences, concerns, ideas and inspiration for improving the user experience of ORNL neutron data systems! As we want the discussions to focus on your interests, please visit link to vote for your favorite topics (or suggest your own!) before the session. <https://forms.gle/kPzzhf6XtgmEEjVM6>

Wednesday, June 8

12:30 pm – 1:30 pm

SNS-HFIR User Group Town Hall

Members of the SHUG Executive Committee (SHUG-EC) and Neutron Scattering Division in ORNL will join the user community to discuss recent and upcoming activities. SHUG-EC will present a proposal of the bylaw change related with the SHUG membership as well as the report of other activities. There will be a facility presentation from ORNL related to the facility upgrade and outage. It also includes an open discussion session to answer questions from the community members.
