The Coalition for National Security Research (CNSR), representing the undersigned research universities, scientific associations, businesses, and institutions, urges you to pass an FY2015 Omnibus Appropriations bill this year that includes strong investments in the U.S. Department of Defense Science and Technology accounts. It is imperative to maintaining our military's technological superiority that an FY 2015 Omnibus Appropriations bill includes at least $2.27 billion for 6.1 basic research accounts, and at least $12.04 billion for Defense Science and Technology Accounts (Defense S&T); the same amount provided in the Senate-proposed FY 2015 DOD Appropriations bill.

The passage of an FY 2015 Omnibus Appropriations bill will provide the long term security needed to fund Defense S&T accounts that simply would not be possible through a continuing resolution. An omnibus appropriations bill would better support the goal of these accounts, which is to keep the defense research pipeline filled with innovative, cutting edge research to benefit our warfighters. At a time when our global competitors are expanding their research capabilities, we are decreasing ours and creating an innovation deficit that will continue to grow unless we intervene now. A decrease in investment in Defense S&T will have a significant impact on future military readiness and capabilities.

Continued investments in Defense S&T not only support the development of the technologies of the future, but also train the next generation of scientists and engineers and provides critical support for STEM programs. Failure to adequately fund these accounts, at levels already authorized, may have a long-term negative impact on our capacity and our technological edge. DoD’s investments in technological innovation have provided significant advances in equipment and tactics used by our warfighters as they face ever-changing threats and challenges. Without sustained investment in these areas, we will jeopardize our military’s strength and lose our technological advantage.

Given the critical role of the Defense Science and Technology programs in maintaining military readiness and providing a technologically superior force, we urge Members of the 113th Congress to pass an FY 2015 Omnibus Appropriations bill before the end of the year and the adjournment of this Congress.
Sincerely,
