

The MRS Awards

# Endowment Fund

In order to secure the future of an awards program of high caliber, and thereby maintain this valuable extra dimension of enrichment for the professional, educational, and general communities, the Materials Research Society requires a substantial Endowment Fund. The Society is deeply grateful to those individuals, and corporate and foundation donors who have already contributed to this Fund. In order to approach self-sufficiency, however, further donations are needed. MRS earnestly solicits consideration of this need by corporations, foundations, and individuals who share our vision of this program as an investment in the future.

For further information about the Awards Endowment Fund, please contact:

Materials Research Society Awards Program awardsprogram@mrs.org

The MRS

# Awards Program

The MRS Awards Program strives to acknowledge outstanding contributors to the progress of materials research, and to recognize their exciting and profound accomplishments. We seek to honor those whose work has already had a major impact in the field, those who have defined the frontiers of the field, those who are outstanding exponents of their science, and those young researchers whose work already leads to great expectations for future leadership. Not only do we honor the award recipients, we also believe that by highlighting these leaders in our field and their creative work, we will enrich the awareness of the progress and diversity of materials research, both within the materials community and in the wider community at large.

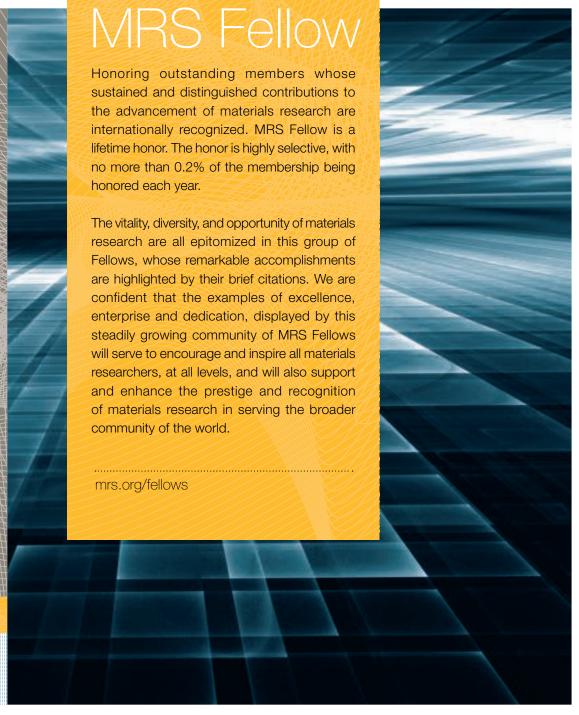

Nomination information, as well as, guidelines for proposing the creation of a new MRS award can be found by visiting mrs.org/awards

# Table of Contents

- 2 MRS Fellow
- 4 Von Hippel Award
- 7 David Turnbull Lectureship
- 9 MRS Med
- 12 Innovation in Materials Characterization Award
- 14 Materials Theory Awar
- 15 Mid-Career Researcher Award
- 16 MRS Impact Award
- 17 The Kavli Foundation Early Career Lectureship in Materials Science

- 18 Outstanding Early-Career Investigator
- 20 MRS Nelson "Buck" Robinson Science & Technology Award for Renewable Energy
- 21 MRS Postdoctoral Awards
- 23 MRS Bulletin Postdoctoral Publication Prize
- 24 MRS Woody White Service Award
- 25 MRS Communications Lecture
- 26 Graduate Student Award

2023

#### Deji Akinwande

The University of Texas at Austin
For contributions to the development of
wafer-scale monolayer graphene, and the
realization of flexible nanosystems

#### James J. Coleman

The University of Texas at Arlington

For the development of growth and processing methods for strained layer and selective area quantum well and nanostructure materials and devices

#### David A. Ginger

University of Washington

For pioneering research on nanostructured materials, especially the creative application of microscopy to characterize nanostructured semiconductors, including polymers and hybrid perovskites, for solar energy harvesting

#### Tony A. Heinz

Stanford University

For major contributions to the elucidation of the properties of surfaces, interfaces, and nanoscale materials, including carbon nanotubes, graphene, and 2D semiconductors, as well as to scientific and academic leadership

#### Prashant V. Kamat

University of Notre Dame

For advancing the knowledge of materials chemistry through elucidation of the basic principles underlying light induced chargetransfer processes at heterogeneous interfaces, from quantumconfined semiconductors, to metallic nanoparticles, and to their hybrids

#### Ho Nyung Lee

Oak Ridge National Laboratory

For contributions to the advancement of precision synthesis and materials science of complex oxide thin films and heterostructures, and for his leadership and service to the materials science community

#### Zhigun Lin

National University of Singapore

For pioneering contributions to develop general and robust strategies for precision synthesis, controlled evaporative selfassembly, solution-printing, and interfacial engineering of nanomaterials for energy conversion and storage

#### Benji Maruyama

U.S. Air Force Research Laboratory
For pioneering autonomous research,
for nurturing a diverse, equitable &
inclusive community through sustained
service to MRS and other organizations,
and for advancing the science of carbon
nanomaterials

#### Phillip Messersmith

University of California, Berkeley

For contributions to the fundamental understanding of wet biological adhesion, leading to the design and translation of biologically inspired materials for medical, industrial and consumer applications

#### Nitin Padture

Brown University

For sustained and distinguished contributions to materials research in the areas of advanced composites, high-temperature coatings, and emerging photovoltaics, and outstanding leadership and service to the broader materials community

#### Kristin Persson

University of California, Berkeley

For pioneering the field of data-driven materials design

#### Yabing Qi

Okinawa Institute of Science and Technology

For seminal contributions to the application of surface/interface science and advanced characterization in correlating fundamental research with device applications of metal halide perovskite materials and organic semiconductor

#### Zhifeng Ren

University of Houston

For pioneering contributions to superconducting electron pairing symmetry, alignment of carbon nanotubes, thermoelectric property enhancement by nanostructuring, water electrolysis catalysts, boron arsenide crystals with high thermal conductivity and carrier mobility

#### Julie M. Schoenung

University of California, Irvine

For pioneering contributions in trimodal composites, coatings, additive manufacturing, green engineering, and mentoring of next-generation of materials scientists

#### Yuri Suzuki

Stanford University

For pioneering contributions to epitaxial magnetic oxide thin film heterostructures and devices with tailored magnetic and electronic properties, and dedicated service to the materials research community

#### **Martin Winter**

University of Münster

For pioneering battery research and exemplary leadership in diversifying young talents in energy/materials science, establishing international cooperation programs, and promoting understanding of energy storage in all groups of society

#### Kana Xu

U.S. Army Research Laboratory

For ground-breaking contributions to electrolytes, battery science and electrochemical interfaces, in particular pioneering high-concentration aqueous electrolytes with expanded electrochemical stability windows, and fundamental understanding of electrolyte-material interactions

# 2022 Recipients

#### Shefford P. Baker

Cornell University

#### Prashant V. Kamat

University of Notre Dame

#### Karen L. Kavanagh

Simon Fraser University

#### Pooi See Lee

Nanyang Technological University

#### Peter K. Liaw

University of Tennessee

#### Theodore D. Moustakas

Boston University

#### **Jagit Nanda**

Oak Ridge National Laboratory

#### Roger Narayan

North Carolina State University

#### Alberto Salleo

Stanford University

#### **Harry Tuller**

Massachusetts Institute of Technology

#### Qihua Xiong

Tsinghua University

#### Guihua Yu

University of Texas at Austin

#### Arthur von Hippel 1976

Massachusetts Institute of Technology

In whose honor the premier award of the Materials Research Society is named, a pioneer in the study of dielectrics, semi-conductors. ferromagnetics, and ferroelectrics. He was an early advocate of the interdisciplinary approach to materials research, and his example substantially furthered the science of materials.

#### William O. Baker 1978

Bell Laboratories

Led research into solid state materials and macromolecules, dielectric properties and dynamic mechanical properties of crystals and glasses, information processing technology, and plastics, fibers, and natural and synthetic rubbers. He nurtured and oversaw the development of one of the world's preeminent laboratories.

#### David Turnbull 1979

Harvard University

Has distinguished himself in many areas of materials research, including kinetics to crystal nucleation and growth, diffusion in metals, and glass formation.

#### W. Convers Herring 1980

Stanford University

Demonstrated that whiskers of high crystalline perfection would exhibit extraordinary mechanical properties. He is also held in esteem for his theoretical contributions to the understanding of surfaces and surface tension.

#### James W. Mayer 1981

Cornell University

Carried out research on implantation that identified the damage and the epitaxial regrowth phenomena crucial to the semiconductor industry, and pioneered the use of ion beam techniques for materials analysis.

#### Clarence M. Zener 1982

Carnegie Mellon University

Performed the definitive work on internal friction in solids. His influence is most visibly expressed in the line of research that resulted in the invention of the Zener diode and laid the foundation for the development of semiconductors.

#### Sir Peter B. Hirsch 1983

University of Oxford

Is universally known for his research with the electron microscope into imperfection in the crystalline structure of materials and the relationship between structural defects and mechanical properties.

#### Walter L. Brown 1984

AT&T Bell Laboratories

Pioneered studies on semiconductor surface states, semiconductor radiation detectors, and the application of particle/solid interactions to the study of materials.

#### John W. Cahn 1985

National Bureau of Standards

Is today's foremost scientist in the thermodynamics of phase equilibrium. He has made major contributions in solidification, crystal growth, glass formation, and the thermodynamics of surfaces and interfaces.

# Minko Balkanski 1986

Université Pierre et Marie Curie

Has made major contributions to the understanding of semiconductors and other materials, particularly through his development and use of optical spectroscopies which led to an understanding of elementary excitations and band structures in these materials.

#### Sir Charles Frank 1987

University of Bristol

Has had wide-ranging impact on modern materials science through seminal contributions in areas of inorganic crystals, metals, polymers, and liquid crystals. His outstanding research in crystallography, chemistry, physics, and materials science exemplifies the interdisciplinary approach.

# Jacques Friedel 1988

Université de Paris-Sud

Has made pioneering contributions within the domain of condensed matter sciences which have profoundly influenced, theoretically and experimentally, advances ranging from the quantum theory of solids, materials science and metallurgy to chemistry. He is noted for major contributions to the understanding of dislocations and strength of materials, electron theory of metals, and the properties of alloys.

#### **John B. Goodenough** 1989 The University of Texas, Austin

Has made distinguished contributions to the field of solid state sciences, where his insights, ideas, knowledge, and research have consistently drawn together the basic concepts of physics and chemistry in the conquest of wide-range fundamental topics. Through the years, his work can be said to have built the principal conceptual foundations of the science and solid state chemistry.

#### Robert W. Balluffi 1990

Massachusetts Institute of Technology

Whose seminal experimental and analytical contributions have clarified our fundamental understanding of the atomic mechanisms of sintering, Kirkendall phenomena, dislocation climb, solid-state diffusion, the production and recovery of radiation damage, grain boundary structure and energetics in metals and ceramics.

#### Theodore H. Geballe 1991

Stanford University

Has made ingenious use of chemical principles to synthesize novel materials of technological importance, has executed careful experiments on a wide range of materials to illuminate fundamental materials properties and behavior, and has provided leadership in helping to formulate the modern concepts of interdisciplinary as a scientist, teacher, and administrator.

#### Michael F. Ashby 1992 University of Cambridge

Has made seminal contributions to subjects as diverse as dispersion hardening, grain boundary sliding, creep, fracture, sintering, cellular materials, ice mechanics, and wear.

#### Frederick Seitz 1993 The Rockefeller University

Has played a seminal role in establishing the modern fields of solid-state physics and materials science through his many basic books and research papers, and for his leadership as a teacher and administrator in encouraging the growth of these disciplines.

#### Alfred Y. Cho 1994 AT&T Bell Laboratories

Pioneered the development of molecular beam epitaxy (MBE) and its application to new devices based on quantum wells and artificially structured materials.

# William W. Mullins 1995

Carnegie Mellon University

Has made profound contributions to the understanding of grain boundary motion, morphological stability, the structure of surfaces and interfaces, and flow and diffusion as stochastic phenomena.

#### Sir Alan H. Cottrell 1996

University of Cambridge

Converted crystal dislocations from a hand waving hypothesis to a rigorous discipline, transformed the understanding of brittle fracture, made varied and crucial advances in the theory of radiation damage, and transformed the teaching of materials science throughout the academic world through his pioneering textbooks.

#### Gabor A. Somorjai 1997 University of California, Berkeley

Has made extraordinary multidisciplinary contributions to the atomic-level understanding of materials surfaces and surface processes with technological importance in heterogeneous catalysis, corrosion, and tribology. Somorjai's ideas and his vision for the future as well as his promotion of the field and of his colleagues' work have had a major impact in stimulating support and raising the visibility of surface science when the field was young.

#### Larry L. Hench 1998 Imperial College of Science, Technology and Medicine

For pioneering accomplishments in the field of glass and ceramics including the demonstration of the first bioactive glass called Bioglass® and subsequent expansion of the field, demonstration of the feasibility of encapsulating nuclear waste products in glass/ceramic matrices, and development of sol-gel processing to produce ultra-high-purity optical and dielectric materials with controlled microstructures.

#### Richard S. Stein 1999

University of Massachusetts. Amherst

In recognition of his seminal work in the development of rheo-optical techniques for polymer characterization and property assessment, his profound contributions leading to a fundamental understanding of how polymeric materials respond to deformation in the melt and solid states, and his pioneering role in the development of graduate education in polymer materials.

#### George M. Whitesides 2000

Harvard University

For bringing fundamental concepts of organic chemistry and biology into materials science and engineering, through his pioneering research on surface modification, self-assembly and soft lithography.

# Simon C. Moss 2001

University of Houston

For consistently timely and essential contributions to identifying and understanding the atomic-level structure of almost every new type of materials discovered in the last thirty years.

#### Howard K. Birnbaum 2002

University of Illinois

For seminal contributions to our understanding of intrinsic point defects, hydrogen in metals, and grain boundary segregation, especially as these effects relate to mechanical properties; for the innovative use of a wide range of novel experimental tools; and for stimulating, directing, and influencing interdisciplinary research throughout the materials community.

#### **Julia R. Weertman** 2003 Northwestern University

For her life-long exceptional contributions to understanding the basic deformation processes and failure mechanisms in a wide class of materials, from nanocrystalline metals to high-temperature structural alloys, and for her inspiring role as an educator in materials science.

#### Nick Holonyak, Jr 2004

University of Illinois

For his many contributions to research and development in the field of semiconductors, not least for the first development of semiconducting lasers in the useful visible portion of the optical spectrum.

# Robert S. Langer 2005 Massachusetts Institute of Technology

For pioneering accomplishments in the science and application of biomaterials in drug delivery and tissue engineering, particularly in inventing the use of materials for protein and DNA delivery, and for his achievements in interdisciplinary research which have generated new medical products, created new fields of biomaterials science, and inspired research programs throughout the world.

#### **Knut Wolf Urban** 2006

Forschungszentrum Jülich GmbH

For sustained contributions to the development and use of electron microscopy, and for major discoveries in the defect physics of quasicrystals and high-temperature superconductors.

#### William Nix 2007 Stanford University

For his original contributions on the deformation and failure of materials, particularly in the areas of thin films, small volumes, and high-temperature alloys; for pioneering mechanical test methods; and for educating and mentoring future generations of materials scientists.

#### Herbert Gleiter 2008

Forschungszentrum Karlsruhe

For his imaginative experiments on the role of defects that have led to new insights into the importance of length-scale in materials and have resulted in many new applications.

# **Tobin J. Marks** 2009 *Northwestern University*

For consistently discovering and applying new scientific principles, and for advancing materials science across a spectrum from self-assembly to crystal growth, encompassing organic electronic, photonic, and photovoltaic materials, and oxide dielectrics, conductors, and superconductors.

#### L. Eric Cross 2010

The Pennsylvania State University

For his imposing leadership in the science and applications of ferroelectric materials.

#### A. Paul Alivisatos 2011

Lawrence Berkeley National Laboratory

For the development of the fundamental scientific basis for growing and utilizing defect-free colloidal semiconductor nanoparticles, providing the basis for biological imaging, solid state lighting, and the capture and conversion of solar energy to electricity.

#### Stuart S.P. Parkin 2012

IBM Almaden Research Center

For pioneering contributions to the science and technology of spintronic materials, particularly in establishing the fundamental foundations of spin-engineered magnetic heterostructures and demonstrating artificial atomically layered magnetic multilayers for applications in field sensing, magnetic memory and data storage devices.

#### Mildred S. Dresselhaus 2013

Massachusetts Institute of Technology

For her pioneering contributions to the fundamental science of carbon-based and other low electron density materials, her leadership in energy and science policy, and her exemplary mentoring of young scientists.

#### Marvin L. Cohen 2014

University of California, Berkeley

For explaining and predicting properties of materials and for successfully predicting new materials using microscopic quantum theory.

#### Sir Richard H. Friend 2015

University of Cambridge

For pioneering research on highly original materials phenomena and device concepts, enabled by polymeric semiconducting materials, and imprinting an indelible influence on contemporary materials science and the new field of plastic electronics.

#### Charles M. Lieber 2016

Harvard University

For pioneering contributions to nanoscience, defining the foundations of rational synthesis of nanoscale wires, characterization of their fundamental physical properties, and the development of applications of these materials in chemistry, biology and medicine.

#### C.N.R. Rao 2017

Jawaharlal Nehru Centre for Advanced Scientific Research

For his immense interdisciplinary contributions to the development of novel functional materials, including magnetic and electronic properties of transition metal oxides, nanomaterials such as fullerenes, graphene and 2-D inorganic solids, superconductivity and colossal magnetoresistance in rare-earth cuprates and manganates.

#### Hideo Hosono 2018

Tokvo Institute of Technology

For the discovery of high Tc iron-based superconductors, creation of transparent oxide semiconductors and inorganic electrides.

#### Jerry Tersoff 2019

IBM T.J. Watson Research Center

For advancing the understanding of lowdimensional and nanoscale electronic materials, surfaces and interfaces, through elegant theoretical models that highlight the essential physics controlling growth, structure and electronic properties.

#### Cato T. Laurencin 2020

University of Connecticut

For pioneering work in engineering of musculoskeletal tissues, for extraordinary work guiding technology and science policy, and for promoting ethnic diversity and excellence in science.

#### Harry Atwater 2021

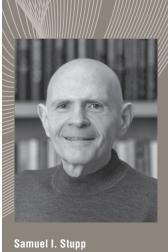

California Institute of Technology

For fundamental research in light-matter interactions—particularly nanophotonics. plasmonics, photonic metamaterials, and solar energy conversion—and numerous applications of photon control of materials illustrating the value of fundamental research to technologies that improve the quality of life.

#### Samuel I. Stupp 2022

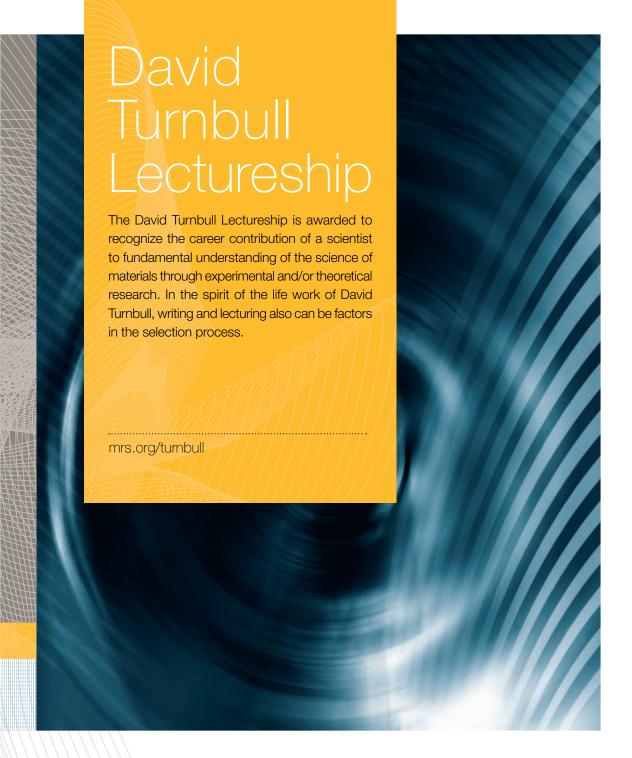

Northwestern University

For pioneering contributions to the development and understanding of a broad range of molecularly designed supramolecular soft materials that function as bioactive scaffolds in regenerative medicine, matrices for photocatalytic activity, and stimuli-responsive robotic structures.

2022 Von Hippel Award Recipient

#### Thomas R. Anthony 1992

General Electric Company

For outstanding contributions to the understanding of diffusion, thermomigration, and the synthesis of diamond.

#### Morris Cohen 1993

Massachusetts Institute of Technology

For his contributions to the development of physical metal-lurgy, especially in the mechanism and kinetics of martensitic transformation, and for his leadership in establishing the broader discipline of materials science and engineering.

#### Arthur S. Nowick 1994

Columbia University

For his pioneering work in anelastic and dielectric behavior, in fast ion conductors, and in amorphous alloys, and for his excellence in teaching and writing.

#### Didier R. de Fontaine 1995

University of California, Berkeley

In recognition of fundamental contributions and insights in the fields of order/disorder phenomena in materials and computational techniques for phase diagrams.

# Robert E. Newnham 1996

Pennsylvania State University

For pioneering the field of ceramic composites for electronic and optical applications, and in recognition of a distinguished career of guiding students, lecturing, and writing.

#### Merton C. Flemings 1997

Massachusetts Institute of Technology

For contributing to the foundations and technology of solidification processing and for educating a generation of materials engineers.

#### H. Eugene Stanley 1998

Boston University

For his insights into the statistical aspects of materials phenomena including phase transitions, pattern formation, and disordered, granular, and soft materials, and for his outstanding lecturing and writing on these topics.

#### Joseph E. Greene 1999

University of Illinois

For contributions to the use of non-thermal methods in the growth of thin films and the engineering of their phase, composition, and microstructure; and for excellence in teaching and writing.

#### Anthony G. Evans 2000

Princeton University

For outstanding contributions and leadership in bringing fundamental insights in mechanical behavior to materials engineering through research, teaching, mentoring, writing, and lecturing.

#### James R. Chelikowsky 2001

University of Minnesota

For his contributions to the fundamental understanding of electronic, optical, mechanical, surface and interface properties of bulk and nanostructured semiconductors, ceramics, and metals through ab initio calculations; and for excellence in teaching, lecturing, and writing.

#### Robert W. Cahn 2002

University of Cambridge

For service to the materials science community through writing, editing, mentoring, and fostering of international understanding, as well as for outstanding contributions to the development of physical metallurgy through research on recovery and recrystallization, rapid solidification, and intermetallic compounds.

# Ellen D. Williams 2003

University of Maryland

For groundbreaking research on the atomicscale science of surfaces and for leadership, writing, teaching, and outreach that conveys her deep understanding of and enthusiasm for materials research.

#### Frank S. Bates 2004 University of Minnesota

For pioneering contributions to the fundamental understanding of structure and properties of complex polymeric materials, particularly block copolymers and polymeric vesicles, coupled with outstanding lecturing, writing, teaching, and educational leadership.

#### Eugene E. Haller 2005

University of California, Berkeley

For pioneering achievements and leadership in establishing the field of isotopically engineered semiconductors, for outstanding contributions to materials growth, doping and diffusion, and for excellence in lecturing, writing, and fostering international collaborations.

# Austen Angell 2006

Arizona State University

For pioneering contributions to the fundamental understanding of the formation, dynamics, and properties of glasses, and particularly his development of fragility as an essential tool for characterizing glass forming materials, coupled with a comprehensive understanding of the field effectively communicated through lectures and publications.

#### Ramamoorthy Ramesh 2007

University of California, Berkeley

For his pioneering contributions to the materials science of complex oxide heterostructures and nanostructures, including multiferroics, ferroelectrics, and magnetoresistive oxides; and for his enthusiasm and leadership in conveying the excitement of this field to a broad audience.

#### David N. Seidman 2008

Northwestern University

For research that has made major contributions to our understanding of point defects and the role they play in radiation damage, and phase transformations; unique studies of interfacial segregation; and especially for the development and fruitful use of atom-probe spectrometry; for numerous seminal publications, and excellence in education/training students and colleagues in the laboratory, classroom and conferences.

#### Edward J. Kramer 2009

University of California, Santa Barbara

For outstanding contributions in bringing insights and understanding to flux pinning in superconductors and to the fundamentals of fracture, diffusions, interface phenomena in complex polymeric materials through research, teaching, mentoring, writing, and lecturing.

#### David D. Awschalom 2010

University of California, Santa Barbara

For pioneering achievements and leadership in establishing the field of semiconductor spintronics, including fundamental discoveries of spin transport and coherence in the solid state, developing new experimental techniques and materials engineering for spin-based quantum information science, and for excellence in communication through lecturing and writing.

#### Phaedon Avouris 2011

IBM T. J. Watson Research Center

For his development of nanoscience and nanotechnology through research, publications, lecturing and mentoring: in particular, for his work on carbon nanotubes, graphene and semiconductor surfaces, imaging and measuring their electronic structure and properties; modifying them chemically and physically using scanning probe techniques; and incorporating them into advanced electronic and photonic devices.

#### **Robert Sinclair** 2012

Stanford University

For his original contributions to the understanding of atomic arrangements in solids and their relationship to diverse materials phenomena including martensitic transformations, dislocation interactions with interfaces, phase equilibria in complex thin-film systems, and nanoscale interactions in soft matter, for seminal contributions to *in situ* and high-resolution transmission electron microscopy, development of their combined use, and for passionate and dedicated teaching, advising, and academic leadership.

#### Robert O. Ritchie 2013

University of California, Berkeley

For pioneering contributions to, and teaching us all how to think about, the mechanistic role of microstructure in governing fatigue and fracture in a variety of materials systems, and communicating his scientific insights to the world audience through eloquent lectures and seminal publications.

#### Rodney S. Ruoff 2014

Ulsan National Institute of Science and Technology

For pioneering discoveries related to carbon materials and their innovative preparation, characterization, and mechanics.

#### Jacob Klein 2015

Weizmann Institute of Science

For discoveries which transformed our understanding of soft matter and interfaces, through sustained research, inspirational lecturing and academic leadership.

#### James De Yoreo 2016

Pacific Northwest National Laboratory

For discoveries that have shaped our understanding of crystallization science.

#### Sigurd Wagner 2017

Princeton University

For groundbreaking contributions to the science and technology of thin film photovoltaics, amorphous silicon and flexible large-area electronics.

#### M. Stanley Whittingham 2018

Binghamton University (SUNY)

For fundamental contributions to solid state ionics including the discovery of the key role of intercalation mechanisms, and the development and commercialization of rechargeable Li-ion batteries.

#### Paula T. Hammond 2019

Massachusetts Institute of Technology

For her contributions to the science, engineering and applications of self-assembled macromolecular systems.

#### Sossina M. Haile 2020

Northwestern University

For fundamental contributions to the electrochemical and thermochemical materials science that advance sustainable energy, for her commitment to the broader international materials community and for being an inspiring colleague and passionate mentor.

#### Nicholas A. Kotov 2021

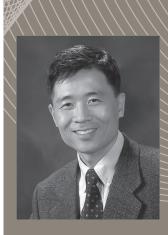

University of Michigan

For/foundational discoveries in interfacebased engineering of self-organizing materials.

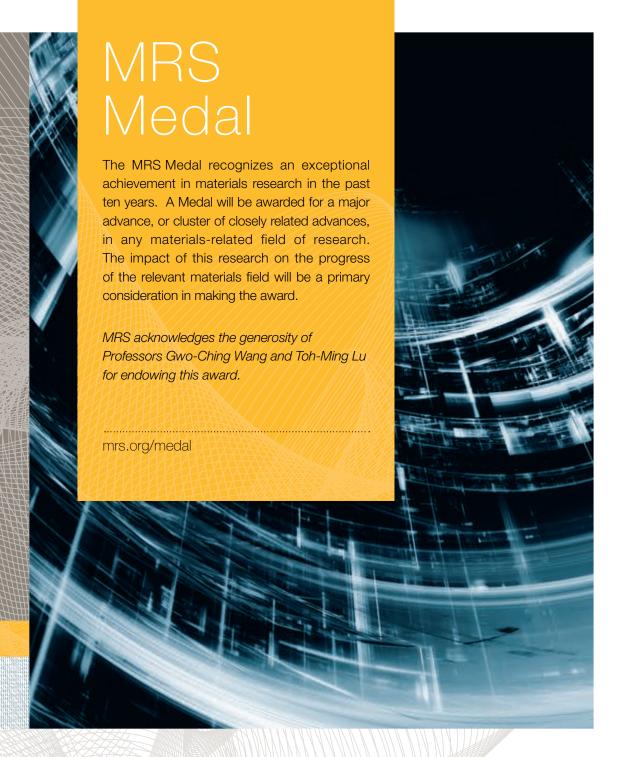

#### Chang-Beom Eom 2022

University of Wisconsin-Madison

For pioneering research and insightful lectures on epitaxy of oxide materials and its impact on applications in electronics.

**Chang-Beom Eom** 2022 David Turnbull Lectureship Recipier

#### Arthur J. Freeman 1990

Northwestern University

In recognition of his pioneering achievements in the field of monolayer and low dimensional magnetism.

#### Duward F. Shriver 1990

Northwestern University

In recognition of his seminal work in the synthesis, characterization, understanding and application of polymer based solid electrolyte materials.

#### Bernard S. Meyerson 1991

IBM T.J. Watson Research Center

In recognition of his dynamic research leading to the fabrication of high speed heterojunction bipolar transistors.

#### Shigeyuki Somiya 1991

Nishi Tokyo University

In recognition of his innovation and energy in pioneering the field of hydro-thermal synthesis of ceramic materials.

#### L. Eric Cross 1992

Pennsylvania State University

In recognition of his leadership and vision in the atomic scale engineering of relaxor ferroelectric materials as the prototype of self-assembling nano-composites.

#### Stephen J. Pennycook 1992

Oak Ridge National Laboratory

For the development and application of incoherent (Z contrast) imaging in the scanning transmission electron microscope for direct determination of the atomic scale structure and chemistry of materials and interfaces.

#### Donald R. Huffman 1993

University of Arizona

# Wolfgang Krätschmer 1993

Max-Planck Institute für Kernphysik

For the discovery of a method to produce macroscopic quantities of fullerenes, and for elucidating their properties.

#### Max G. Lagally 1994

University of Wisconsin, Madison

For innovative development of STM as a quantitative probe of the microscopic mechanisms of crystal growth and ordering at surfaces.

#### Kenneth S. Suslick 1994

University of Illinois, Urbana—Champaign

For incisive studies of chemical effects of ultrasound and the use of sonochemistry in synthesis of unusual inorganic materials.

#### Federico Capasso 1995

AT&T Bell Laboratories

For seminal contributions to compositionally graded materials, using bandgap engineering, and their innovative applications in electronics and optoelectronics.

#### Rudolf M. Tromp 1995

IBM T.J. Watson Research Center

For pioneering experiments on the role of atomic structure, surface stress, and surfactants in heteroepitaxial growth.

#### Jerry D. Tersoff 1996

IBM T.J. Watson Research Center

For seminal contributions to the theory of strain relaxation in thin films.

Nichia Chemical Industries Ltd.

For the development of lattice-mismatched GaN-based heteroepitaxy and its application to the creation of blue and green light-emitting diodes and short wavelength laser diodes.

#### William L. Johnson 1998

California Institute of Technology

For the development and fundamental understanding of bulk metallic glass forming alloys.

#### M. George Craford 1999

Hewlett Packard

For pioneering contributions and leadership in the development of visible-spectrum light-emitting diode materials and devices.

#### Stephen Forrest 1999

Princeton University

For pioneering contributions to the growth and optoelectronic applications of organic semiconductor thin films.

#### Dieter M. Gruen 2000

Argonne National Laboratory

For the low-pressure synthesis of nanocrystalline diamond films from fullerene precursors.

#### Samuel I. Stupp 2000

Northwestern University

For seminal contributions to the development of supramolecular materials that exhibit unique properties resulting from their hierarchical organization in the condensed state.

#### Norman C. Bartelt 2001

Sandia National Laboratories

For contributions to the statistical mechanics of materials surfaces.

#### Mathew Mate 2001

IBM Almaden Research Center

For pioneering studies of friction at the atomic and molecular level.

#### Uzi Landman 2002

Georgia Institute of Technology

For molecular dynamics simulations elucidating the microscopic behavior of solid and liquid interfacial junctions and atomistic processes of tribology.

#### Charles M. Lieber 2002

Harvard University

For controlled synthesis of nanowire and nanotube materials.

#### C. Jeffrey Brinker 2003

Sandia National Laboratories

For his pioneering application of principles of sol-gel chemistry to the self-assembly of functional nanoscale materials

#### Ivan K. Schuller 2003

University of California, San Diego

For his innovative studies of exchange bias in magnetic heterostructures and nanostructures.

#### Jacob N. Israelachvili 2004

University of California, Santa Barbara

For his work on adhesion and friction, which has revolutionized the understanding of molecular mechanisms responsible for these technologically vital phenomena.

#### Toh-Ming Lu 2004

Rensselaer Polytechnic Institute and

#### Sunil K. Sinha 2004

University of California, San Diego/ Los Alamos National Laboratory

For seminal contributions to understanding mechanisms of thin-film surface and interface morphology evolution and establishing the foundations of diffraction and scattering methods for its quantitative analysis.

#### Reshef Tenne 2005

Weizmann Institute

For realizing that nanoclusters of layered compound materials (e.g., MoS2 WS2) can be made to fold into hollow cage structures, analogous to graphitic carbon. These structures, known as 'Inorganic Fullerenes,' constitute a materials class with exciting new properties.

# Pulickel Ajayan 2006

Rensselaer Polytechnic Institute and

#### Won Bong Choi 2006

Florida International University

For important developments in the material science and applications of carbon nanotubes.

#### Mark Thompson 2006

University of Southern California

For development of highly efficient heavy metal phosphor complexes.

#### Omar M. Yaghi 2007

University of California-Los Angeles

For his pioneering work on the synthesis, structure, and theory of metal organic frameworks.

#### Darrell G. Schlom 2008

Cornell University

#### James F. Scott 2008

Cambridge University

For fundamental contributions to the materials science of oxides underlying current and future electronic devices.

#### Gerbrand Ceder 2009

Massachusetts Institute of Technology

For pioneering the high-impact field of firstprinciples thermodynamics of batteries materials and for the development of high power density Li battery compounds.

#### Walter A. de Heer 2010

Georgia Institute of Technology

For his pioneering contributions to the science and technology of epitaxial graphene.

#### Peidong Yang 2011

University of California, Berkeley

For outstanding contributions in the creative synthesis and assembly of semiconductor nanowires and their heterostructures, and innovations in nanowire-based photonics, thermoelectrics, solar energy conversion and nanofluidic applications

#### Zhong Lin (Z.L.) Wang 2011

Georgia Institute of Technology

For seminal contributions in the discovery, controlled synthesis, and fundamental understanding of ZnO nanowires and nanobelts, and the design and fabrication of novel, nanowire-based nanosensors, piezotronic devices, and nanogenerators.

#### Jennifer A. Lewis 2012

University of Illinois at Urbana-Champaign
For pioneering contributions in the design
of viscoelastic inks composed of colloidal,
polymeric, and organometallic building blocks
and their directed assembly into planar and 3D
functional architectures.

#### Miquel Salmeron 2012

Lawrence Berkeley National Laboratory

For his contribution to the molecular level understanding of material surfaces under ambient conditions of gas pressure and temperature made possible by the development and application of Ambient Pressure Photo-Electron Spectroscopy (APPES), which revealed the chemical structure of liquids, catalysts surfaces and nanoparticles during environmental reaction conditions.

#### Alexander A. Balandin 2013

University of California, Riverside

For discovery of the extraordinary high intrinsic thermal conductivity of graphene, development of an original optothermal measurement technique for investigation of thermal properties of graphene, and theoretical explanation of the unique features of the phonon transport in graphene.

#### Mercouri G. Kanatzidis 2014

Northwestern University and Argonne National Laboratory

For the discovery and development of nanostructured thermoelectric materials.

#### Sharon C. Glotzer 2014

University of Michigan

and

#### Nicholas A. Kotov 2014

University of Michigan

For foundational work elucidating processes of nanoparticle self-assembly.

#### Richard B. Kaner 2015

University of California, Los Angeles

For the discovery of efficient methods to synthesize water dispersible conducting polymer nanofibers and their applications in sensors, actuators, molecular memory devices, catalysis, and the novel process of flash welding.

#### Robert J. Cava 2016

Princeton University

For pioneering contributions in the discovery of new classes of 3D Topological Insulators.

#### Joanna Aizenberg 2017

Harvard University

For developing new synthesis routes inspired by biological principles for the fabrication of advanced complex multifunctional materials and devices.

#### Younan Xia 2017

Georgia Institute of Technology

For seminal contributions to shapecontrolled synthesis of metal nanocrystals with major impact on catalysis, plasmonics and biomedicine".

#### John Rogers 2018

Northwestern University

For pioneering contributions to materials for diverse classes of bio-integrated/electronic/systems.

#### Catherine J. Murphy 2019

University of Illinois at Urbana-Champaign

#### Haimei Zheng 2019

Lawrence Berkeley National Laboratory

For outstanding contributions on the study of anisotropic nanoscale materials, transformation and application.

#### Yi Cui 2020

Stanford University

200

#### Linda Nazar 2020

University of Waterloo

For outstanding contributions to advanced materials design, synthesis and characterization for energy storage, particularly Li battery technologies.

#### Yury Gogotsi 2021

Drexel University

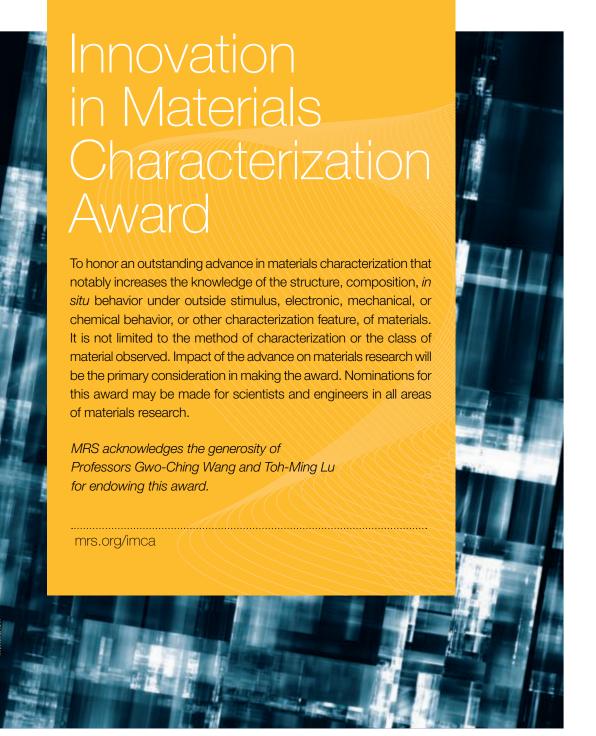

For contributions to advancing the understanding of processing, structure, and properties of two-dimensional carbides and nitrides (MXenes) for energy storage applications.

#### Chad A. Mirkin 2022

Northwestern University

For the invention and implementation of nanoparticle mega-libraries for materials discovery.

Warren C. Oliver 2010

Nanomechanics, Inc.

and

George M. Pharr 2010

Oak Ridge National Laboratory

For seminal contributions to the development of the instrumentation and analysis methods of nanoindentation for characterizing the mechanical properties of materials at the micro- and nanometerlength scales. Their work on nanoindentation has profoundly impacted all fields of materials research where mechanical behavior is important.

Tye T. Gribb 2011

DTE Research & Design LLC

and

Thomas F. Kelly 2011

Cameca Instruments. Inc.

and

David J. Larson 2011

Cameca Instruments, Inc.

For the highly successful conception, design, fabrication, and commercialization of an ergonomic three-dimensional local-electrode atom probe (LEAP) tomograph that enables the determination of the local composition information, on an atom-by-atom basis, of metallic, semiconducting, ceramic and organic materials, on a subnanometer scale, in direct space, with high mass resolving power and signal-to-noise ratio, permitting the determination of small concentrations of all elements.

#### Stephen J. Pennycook 2012

Oak Ridge National Laboratory

For his pioneering use of aberrationcorrected Z-contrast scanning transmission electron microscopy in the characterization of materials at the atomic scale.

D. Bruce Chase 2013

University of Delaware

and

John F. Rabolt 2013

University of Delaware

For the development of Fourier Transform Raman Spectroscopy and the demonstration of its utility for examining the chemical structure and properties of organic molecules and polymers in solids, thin films and solutions.

Albert Polman 2014

University of Amsterdam,

FOM Institute AMOLF, The Netherlands

For the development, application and commercialization of Angle-Resolved Cathodoluminescence Imaging Spectroscopy (ARCIS) as a new tool for optical imaging at the nanoscale, with applications in nanophotonics and materials science in general.

John M. Carpenter 2015

Argonne National Laboratory

For innovations in neutron sources that have fundamentally changed their performance and enabled opportunities for further advancement of materials that improve the quality of life.

#### Niels de Jonge 2016

INM-Leibniz Institute for New Materials and

#### Frances M. Ross 2016

IBM T.J. Watson Research Center

#### **Chongmin Wang** 2016

Pacific Northwest National Laboratory

For seminal contributions to the imaging of specimens in liquids using transmission electron microscopy, revolutionizing the direct observation of materials processes, batteries during operation and biological structures.

#### Joost W.M. Frenken 2017

Advanced Research Center for Nanolithography (ARCNL)

For the development, application and commercialization of high-speed, temperature-controlled, *in situ* scanning probe microscopy, leading to key insights in the structure, dynamics and chemistry of surfaces and interfaces.

#### David G. Cahill 2018

University of Illinois at Urbana-Champaign

For developing transformative methods for characterizing the thermal transport properties of materials and their interfaces using time-domain thermoreflectance (TDTR) and related approaches.

#### Stig Helveg 2019

Haldor Topsoe

For pioneering atomic-scale transmission electron microscopy under reactive gas environments, leading to groundbreaking insights in catalysis, crystal growth and corrosion, aches:

#### Jinghua Guo 2020

Lawrence Berkeley National Laboratory

For pioneering *in situ/operando* soft x-ray spectroscopy characterization of interfacial phenomena in energy, catalysis and chemical materials science.

#### Jianwei (John) Miao 2021

University of California, Los Angeles

For pioneering coherent diffractive imaging for a wide range of material systems and atomic electron tomography for determining atomic positions without assuming crystallinity.

#### Annamaria Petrozza 2022

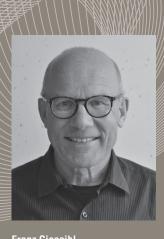

Italian Institute of Technology

For the development and innovative use of time-resolved carrier dynamics measurements, from sub-picoseconds to milliseconds, to fundamentally advance our understanding of the photo-physics of metal-halide perovskites, leading to materials and devices of improved stability.

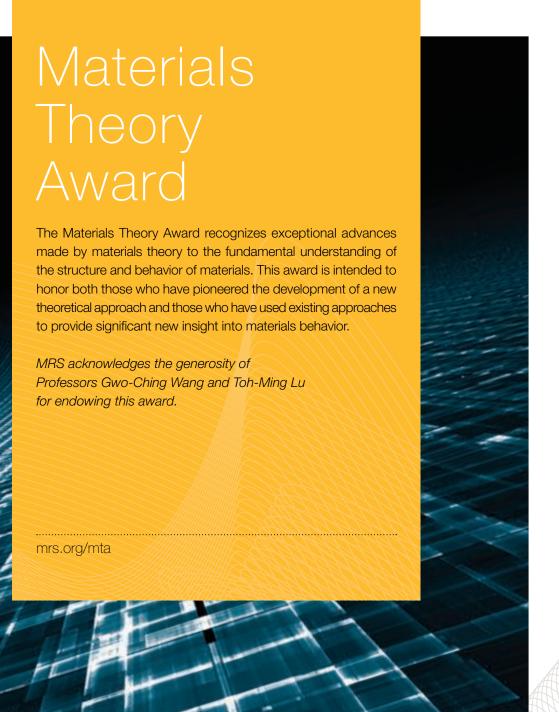

#### Franz Giessibl 2023

University of Rebensberg

For enabling subatomic resolution capability of atomic force microscopy and for the invention of the qPlus sensor, a smart AFM probe with outstanding spatial resolution.

Franz Giessibl 2023 Innovation in Materials Characterization Award Recipient

#### Alex Zunger 2011

University of Colorado, Boulder

For his development of the inverse band structure approach to materials by design and the foundational developments of methods of first-principles theory of solids, leading to innovative and transformative studies of renewable-energy materials and nanostructures.

#### John Perdew 2012

Tulane University

For his pioneering contributions to the fundamental development and nonempirical approximations in density functional theory.

#### David J. Srolovitz 2013

University of Pennsylvania

For decisive and highly influential contributions to the theory and simulation of microstructure, morphological evolution, mechanical behavior, and the structure and dynamics of interfaces.

#### Long-Qing Chen 2014

The Pennsylvania State University

For his pioneering work in the development of the phase-field method and its applications in the computational modeling of mesoscale structures and their dynamics in inhomogeneous materials.

#### Steven G. Louie 2015

University of California, Berkeley

For his seminal contributions to the development of ab initio methods for and the elucidation of many-electron effects in electronic excitations and optical properties of solids and nanostructures.

#### Gerbrand Ceder 2016

University of California, Berkeley, and Lawrence Berkeley National Laboratory

For seminal contributions to the emerging field of computationally guided materials exploiting high-throughput computation and promoting the development of open databases to enable widespread use.

#### Glenn H. Fredrickson 2017

University of California, Santa Barbara

For pioneering the development of fieldtheoretic computer simulation methods and their application to investigate and design self-assembling polymers and soft materials.

#### Giulia Galli 2018 University of Chicago

For the development of advanced firstprinciples simulation methods and their application to the understanding, prediction and design of complex nanostructured materials.

#### Lu Sham 2019

University of California, San Diego

For pioneering contributions to the quantum theory of molecules and solids, especially the Kohn–Sham formulation of density functional theory.

#### Jean-Luc Bredas 2020

The University of Arizona

For seminal theoretical contributions to the design and understanding of novel molecules and materials in thefields of organic electronics and photonics.

#### Emily Carter 2021

University of California, Los Angeles

For advances in quantum mechanics theory with broad applications to materials and chemical sciences.

#### George Schatz 2022

Northwestern University

For pioneering theoretical advances in the properties of plasmonic nanostructures, self-assembly models for soft materials, and the discovery of lattice plasmon polaritons.

#### Kristi S. Anseth 2012

University of Colorado, Boulder

Exceptional achievement at the interface of materials and biology enabling new, functional biomaterials that answer fundamental questions in biology and yield advances in regenerative medicine, stem-cell differentiation, and cancer treatment.

#### John A. Rogers 2013

University of Illinois at Urbana-Champaign

For fundamental and applied contributions to materials, mechanics designs, and assembly techniques for stretchable/flexible electronic systems.

#### Lei Jiang 2014

Chinese Academy of Sciences, China

For establishing fundamental understanding of the interfacial properties of biological systems and transforming that insight into commercialized bioinspired materials with properties better than those of natural systems.

#### Seth R. Marder 2015

Georgia Institute of Technology

For establishing fundamental relationships between the chemical structure of organic molecules and their optical and electronic properties, thereby profoundly impacting how the scientific community designs optimized molecular structures for use in nonlinear optical applications.

# Hongjie Dai 2016

Stanford University

For seminal contributions to carbonbased nanoscience and applications in nanoelectronics, renewable energy, and biological systems.

#### Nicola Spaldin 2017

ETH Zürich

For creating a new theoretical framework describing multiferroics and for service to the materials community.

#### David Mooney 2018

Harvard University

For pioneering contributions to the field of biomaterials, especially in the incorporation of biological design principles into materials and the use of biomaterials in mechanobiology, tissue engineering and therapeutics.

#### Hongyou Fan 2019

Sandia National Laboratories and The University of New Mexico

For outstanding contributions in nanoparticle self-assembly of functional nanomaterials and for leadership within the materials community.

#### Xiangfeng Duan 2020

University of California, Los Angeles

For contributions to rational design and assembly of layered materials for electronic. photonic and energy devices.

#### Zhenan Bao 2021

Stanford University

For pioneering contributions and conceptual developments to organic electronics and skin-inspired electronics.

#### Molly Stevens 2022

Imperial College London

For innovative biosensing nanomaterials technologies for point-of-care disease diagnostics.

#### George Malliaras 2023

University of Cambridge

For outstanding contributions to the fundamentals and development of organic electronic materials and their application in biology and medicine.

**Lynnette D. Madsen** 2017 *National Science Foundation* 

In recognition of her effectiveness in exemplifying technical leadership, advancing diversity, fostering mentoring and communicating persuasively to influence both large and small institutions.

#### Michael Falk 2018

Johns Hopkins University

For broadened participation in STEM education in Baltimore elementary schools; for bringing attention to professional and educational climate issues faced by LGBTQ students and researchers; and for integrating computation into the Materials Science and Engineering curriculum.

#### Meyya Meyyappan 2019

NASA Ames Research Center

For his lifelong dedication toward creating significant and outstanding impact to understanding nanotechnology through global outreach initiatives and for unwavering mentorship.

#### Takiya J. Ahmed Foskey 2020

DuPont

For leadership, mentoring and substantive contributions toward creating and organizing educational opportunities to prepare the next generation, in particular underrepresented and economically disadvantaged youth, to strive for STEM education and careers and be role models in the future.

#### Amy J. Moll 2021

Boise State University

For sustained leadership and impact in materials outreach and education, including founding the department at Boise State University, fostering excellent materials science pedagogy, and engaging the public through museum exhibits and television-documentaries.

#### Kwadwo Osseo-Asare 2022

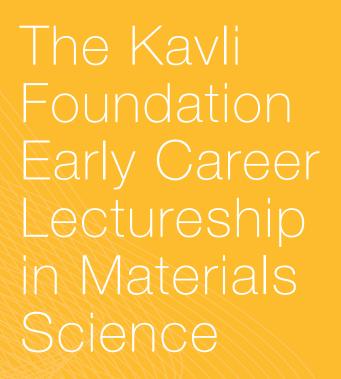

The Pennsylvania State University

For sustained contributions to building a global materials science and engineering community that spans continents from Africa to the Americas

#### Anne Lynn Gillian-Daniel 2023

University of Wisconsin-Madison

For creative leadership in materials education and outreach spanning all ages, in a wide range of venues, and across socioeconomic backgrounds; and for promoting diversity and inclusion.

The Kavli Foundation is dedicated to advancing science for the benefit of humanity, promoting public understanding of scientific research and supporting scientists and their work.

mrs.org/kavli-early-career

# Recipients

Jennifer A. Dionne 2013 Stanford University

------

Julia R. Greer 2014

California Institute of Technology

Ali Khademhosseini 2015

Harvard-MIT Division of Health Sciences and Technology

Andrea Alù 2016

The University of Texas at Austin

Xiaobo Yin 2017

University of Colorado Boulder

Laura Na Liu 2018

University of Heidelberg

Silvia Vignolini 2019

University of Cambridge

Igor Aharonovich 2020

University of Technology Sydney

Susan Bernal Lopez 2021

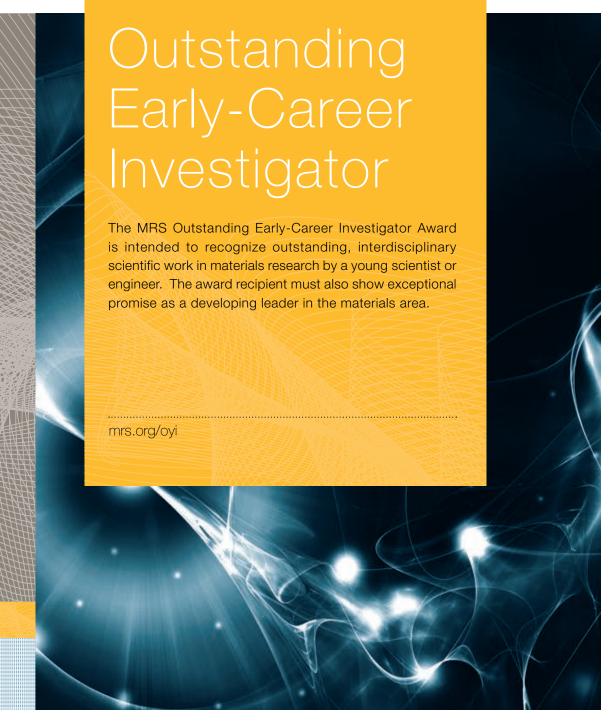

University of Leeds

Aaswath Raman 2022

University of California, Los Angeles

Aaswath Raman 2022 The Kavli Foundation Early Career Lectureship in Materials Science Recipient

#### Stuart S.P. Parkin 1991

IBM Almadin Research Center

Recognizing enterprise in new materials, high Tc superconductors, and magnetic multilayers displaying oscillatory exchange coupling.

#### David D. Awschalom 1992

University of California, Santa Barbara

Recognizing enterprise in the field of nanostructured materials.

#### Charles M. Lieber 1993

Harvard University

Pioneering contributions to the understanding of novel materials through synthesis and elegant determination of complex local structure and electronic properties.

#### David J. Eaglesham 1994

AT&T Bell Laboratories

Creativity, leadership and experimental ingenuity in discovering an understanding of fundamental interface, surface and defect phenomena in semiconductor crystal growth.

#### A. Paul Alivisatos 1995

University of California, Berkeley

Leadership in materials research, notably in the field of nanocrystals.

#### Antonios G. Mikos 1996

Rice University

For the synthesis and processing of new biomaterials for tissue engineering, supports for cells, tissue-growth conduits, targeted cell-adhesion substrates, and cellularresponse stimulants.

#### Christopher N. Bowman 1997

University of Colorado

For seminal contributions to the field of highly crosslinked polymers, information storage materials and computational methods in polymerization engineering.

#### Anne M. Mayes 1998

Massachusetts Institute of Technology

For incisive theoretical and experimental investigations of macromolecules at and near surfaces and interfaces leading to tailorable surface properties, especially novel biocompatible substrates.

#### Chad A. Mirkin 1999

Northwestern University

Pioneering and leadership role in developing a new interdisciplinary field in which complex biological macromolecules are used to assemble inorganic nanoparticle building blocks into functional meso- and macroscopic structures.

#### Frances M. Ross 2000

IBM T.J. Watson Research Center

For innovative and powerful experimental studies, based upon development of novel in situ electron microscopy techniques, that have provided fundamental new understanding of nucleation, growth, oxidation and etching processes in a wide range of materials systems.

#### Kristi S. Anseth 2001

University of Colorado

For innovative work in polymeric biomaterials for drug delivery, bone and cartilage repair, and tissue engineering, and for outstanding leadership potential in this interdisciplinary field of materials research.

#### Timothy J. Deming 2003

University of California, Santa Barbara

For his discovery of synthetic methods to produce polypeptide homopolymers and block copolymers with exquisite control of block length, sequence and secondary structure and the interdisciplinary exploitation of these materials to yield unique hydrogels and inorganic materials.

#### Peidong Yang 2004

University of California, Berkeley

For innovative synthesis of a broad range of nanowire and nanowire heterostructure materials, and the discovery of optically-induced lasing in individual nanowire devices.

#### Harold Y. Hwang 2005

University of Tokyo

For innovative work on the materials physics of transition metal oxides and the atomicscale synthesis of complex oxide heterostructures.

#### **Ju Li** 2006

The Ohio State University

For innovative work on the atomistic and first-principles modeling of nanoindentation and ideal strength in revealing the genesis of materials deformation and fracture.

#### Michael D. McGehee 2007

Stanford University

For innovation and application of organic semiconductors in lasers, light-emitting diodes, transistors and solar cells.

#### Michael S. Strano 2008

Massachusetts Institute of Technology

For innovative work on single walled carbon nanotube chemical modifications, both fundamental and applied, and for pioneering a new class of near infrared sensor architectures based upon chemically induced optical modulation of carbon nanotubes.

#### Teri Odom 2009

Northwestern University

For the development and characterization of nanoparticles and nanostructured arrays designed to filter and propagate plasmonic excitations with unprecedented control and sensitivity.

#### Mark C. Hersam 2010

Northwestern University

For pioneering research on the physics, chemistry, and engineering of nanoelectronic materials and devices, including solution-phase techniques for sorting carbon nanotubes and graphene, and for organic functionalization and nanopatterning of semiconductor surfaces.

#### Dmitri V. Talapin 2011

University of Chicago

For methodological developments of synthesis and self-assembly of inorganic nanocrystals and for fundamental studies transforming colloidal nanostructures into electronic and optoelectronic materials.

#### Markus J. Buehler 2012

Massachusetts Institute of Technology

For highly innovative and creative work in computational modeling of biological, bioinspired, and synthetic materials, revealing how weakness is turned into strength through hierarchical material design.

#### Alexandra Boltasseva 2013

Purdue University & Technical University of Denmark

For pioneering research to develop novel materials for advanced plasmonic, metamaterial and transformation optics devices with potential applications in future nanoscale photonic technologies.

#### Henry J. Snaith 2014

University of Oxford, United Kinadom

For innovation and development of solid state dye sensitized solar cells and for his groundbreaking work in perovskite hybrid solar cells.

#### Karena W. Chapman 2015

Argonne National Laboratory

For contributions to understanding the coupled structure and reactivity of energy-relevant systems and for developing the incisive experimental and analytical tools needed to interrogate these complex materials systems.

#### Ali Javey 2015

University of California, Berkeley

For innovative contributions in integrating nanomaterials into device applications.

#### Dino Di Carlo 2016

University of California, Los Angeles

For pioneering methods to manufacture, measure, and manipulate microstructured materials and applying these innovations to biomedical problems.

#### Timothy J. White 2016

Air Force Research Laboratory

For innovations in the preparation and applications of photo-responsive materials.

#### Jennifer A. Dionne 2017

Stanford University

For innovating new materials and methods to visualize and control nanometer-scale optical, electronic, and chemical processes in situ.

#### James M. Rondinelli 2017

Northwestern University

For pioneering advances in the theoretical understanding of atomic structure-electronic property relations of complex inorganic oxides in bulk, thin film, and superlattice geometries.

#### William Chueh 2018

Stanford University

For groundbreaking research on ionic and electronic charge transport and interface chemistry relevant to electrochemical devices.

#### Vanessa Wood 2018

ETH Zürich

For innovative work in visualizing, quantifying and explaining transport processes in material and devices.

#### Shena Xu 2019

University of California, San Diego

For materials and device designs in biointegrated electronics and stretchable energy systems.

#### Jonathan Rivnay 2020

Northwestern University

For innovative research on an organic semiconductor microstructure and charge transport for electronics and bioelectronics.

#### Huolin Xin 2021

University of California, Irvine

For development of innovative transmission electron microscopy imaging methodologies for advancing energy storage and conversion materials.

#### Prineha Narang 2022

Harvard University

For critical advances in the understanding of materials physics, optical sciences, and topology for the prediction and design of quantum materials.

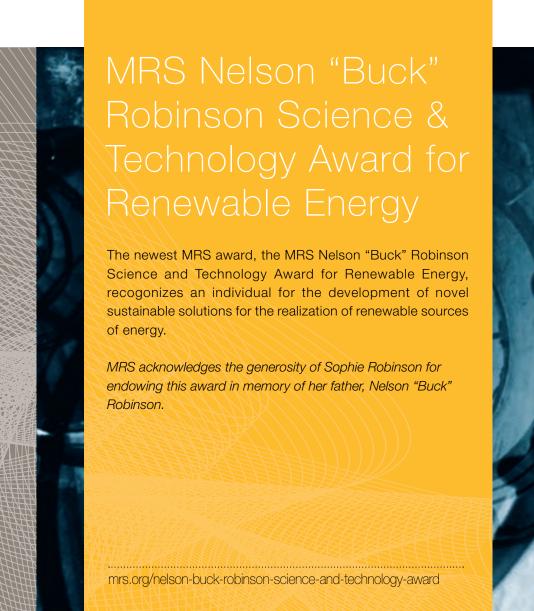

#### Luisa Whittaker-Brooks 2023

University of Utah

For cutting-edge work on the control of structural phase transitions, spins, and thermal-dependent electronic interactions in organic-inorganic quantum well heterostructures.

**Luisa Whittaker-Brooks** 2023 Outstanding Early-Career Investigator Recipient

**Aaswath Raman** 2018 University of California, Los Angeles

Kelsey Hatzell 2019 Vanderbilt University

Aditya Sadhanala 2020

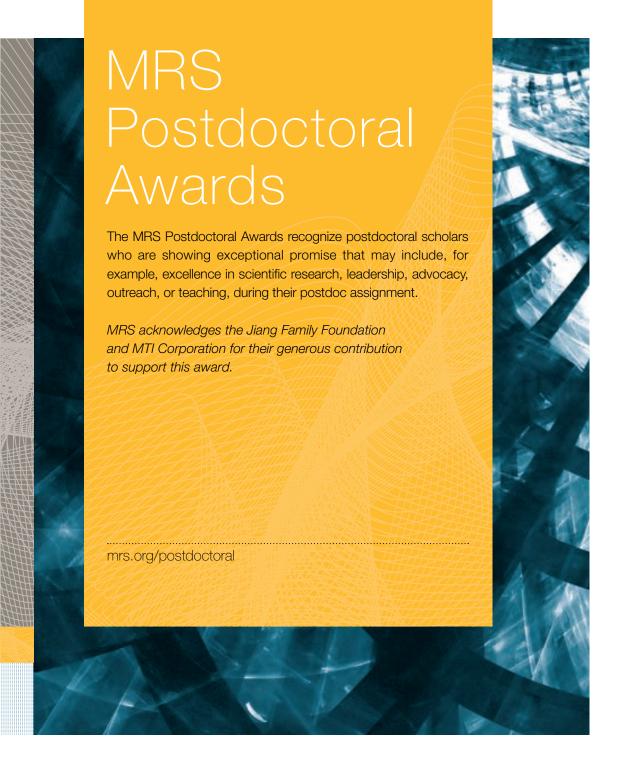

Centre for Nano Science and Engineering at the Indian Institute of Science

Stafford Sheehan 2021 Air Company

Kelsey A. Stoerzinger 2022 Oregon State University

Kelsey A. Stoerzinger 2022 MRS Nelson "Buck" Robinson Science & Technology Award for Renewable Energy Recipient

Jonathan Rivnay Fall 2014

École Nationale Supérieure des Mines de Saint-Étienne

For the development of state-of-the-art organic electronic devices for interfacing with biology, through the elucidation of structure versus electrical properties relationships.

Chao Wang Fall 2014

Stanford University

For innovative research developing selfhealing electronic materials and utilizing the self-healing concept to achieve highperformance, long lifetime electronic and energy storage devices.

**Dustin W. Janes** Spring 2015

The University of Texas at Austin

For outstanding theoretical and experimental contributions to understanding transport in polymer films and membranes and novel nano- and micro-patterning methodologies, and his dedicated mentorship of graduate and undergraduate student researchers.

Yuan Yang Spring 2015

Massachusetts Institute of Technology

For innovative research on electrochemical materials and systems to convert low-grade waste heat into electricity and exploration of new applications of batteries.

Jiamian Hu Fall 2015

The Pennsylvania State University

For pioneering contributions to the theoretical understanding of strain-mediated electric-field-induced magnetization switching in magnetoelectric nanostructures and for designing prototypes of magnetoelectric devices.

Beata Layla Mehdi Fall 2015

Pacific Northwest National Laboratory

For advances in *in situ* transmission electron microscopy instrumentation for electrochemical studies and quantitative understanding of nanoscale processes taking place in energy storage systems.

Babak Anasori Spring 2016

Drexel University

For innovative research on 2D materials, creative and artistic ways of presenting science, dedication to and love of teaching, and student mentoring.

Shinbuhm Lee Spring 2016

Oak Ridge National Laboratory

For the innovative development of multifunctional ionic devices via vertically aligned heterostructures, and outstanding contributions for theoretical and experimental understanding of them.

Qi Li Fall 2016

The Pennsylvania State University

For advancing the field of polymer nanocomposites for electrical energy storage and conversion.

Yongming Sun Fall 2016

Stanford University

For advancing the development of high-capacity battery materials.

Bert Conings Spring 2017

Hasselt University

For innovation in hybrid perovskite photovoltaics, addressing fabrication, lifetime, and toxicity issues.

Yunlong Zi Spring 2017

Georgia Institute of Technology

For pioneering research to improve the efficiency and wider applicability of mechanical energy harvesting systems.

For developing a family of stable, reproducible and highly efficient multication perovskites for optoelectronics.

#### Jieun Yang Fall 2017

de Lausanne (EPFL)

Rutgers, The State University of New Jersey
For creative research in chemically
exfoliated 2D materials and tireless
dedication to mentoring women
in science and engineering.

#### Arnab Banerjee Spring 2018

Oak Ridge National Laboratory

For groundbreaking experiments providing evidence of topological excitations in a two-dimensional magnet, moving toward lossless qubits in quantum computing.

#### Jie Xu Spring 2018 Stanford University

For applying polymer physics concepts to realize integrated, intrinsically stretchable transistors for skin electronics.

#### James Bullock Fall 2018

University California, Berkeley

For the development of dopant-free, selective contacts for high-efficiency Si photovoltaics.

#### Minah Lee Fall 2018

Stanford University

For the development of sustainable organic materials to achieve high-performance energy storage devices and understanding their redox mechanisms.

#### Kaifu Bian Spring 2019

Sandia National Laboratories

For advancing the understanding of nanoparticle assemblies under stress.

#### Nicholas Jackson Spring 2019

Argonne National Laboratory

For foundational theoretical and computational contributions to the study of structure and transport in charged polymers and organic semiconductors.

#### Rachel E. Carter Fall 2019

U.S. Naval Research Laboratory

For contributions to the design of safe battery materials and systems, leadership of students and advocacy for women scientists and engineers.

#### Yasutaka Nagaoka Fall 2019

Brown University

For contributions to the assembly of nanocrystal superstructures.

#### Tian Li Spring 2020

University of Maryland

For the innovative and pioneering research in wood nanotechnology and nanocellulose toward energy, water and sustainability.

#### Xianwen Mao Spring 2020

Cornell University

For developing fabrication strategies and operando imaging techniques for nanoscale electrochemical materials systems important for environmental and energy applications.

#### Edoardo Baldini Fall 2020

Massachusetts Institute of Technology

For implementing novel laser techniques to identify and control collective excitations in quantum materials leading to major advances in the field of excitonics and phononics.

#### Chengwei Wang Fall 2020

University of Maryland

For developing a novel high temperature sintering technique for rapid screening and discovery of high performance ceramics for energy and other applications.

#### Yang Liu Spring 2021

The Pennsylvania State University

For the pioneering research in ferroelectric polymers to achieve high piezoelectric responses, and outstanding contributions to understanding of relaxor ferroelectricity in polymers.

#### Yu Jun Tan Spring 2021

National University of Singapore

For developing stretchable, self-healing materials for smart electronics.

#### Zhijie Chen Fall 2021

Northwestern University

For his outstanding contributions to the fields of porous materials, nanochemistry, and supramolecular assembly.

#### Dasha Nelidova Fall 2021

Institute of Molecular and Clinical

Opthalmology Basel

For creating tunable nanogenetic near-infrared light sensors to restore vision.

#### Mattia Biesuz Spring 2022

University of Trento

For fundamental contribution to the knowledge and development of flash sintering phenomena and processes in ceramics.

#### Aditya Sood Spring 2022

Stanford University

For pioneering correlated dynamic structure and transport studies, and the discovery of a new electrically-triggered metastable phase in an operating device.

#### Liang Feng Fall 2022

Northwestern University

For discovery of mechanisorption, a fundamentally new mode of adsorption.

#### Kenji Yasuda Fall 2022

Massachusetts Institute of Technology

For the discovery of atomically-thin interfacial ferroelectricity in van der Waals heterostructures

#### Yeonsik Choi Spring 2023

Northwestern University

For the development of transient biomedical implants designed to provide the apeutic function over a clinically relevant time frame, reducing costs and risks associated with surgical extraction.

#### Qi Qian Spring/2023

University of California, Los Angeles

For pioneering research in developing and understanding van der Waals heterostructures and superlattices.

Yeonsik Choi
Spring 2023 MRS Postdoctors
Award Recipient

**Qi Qian** Spring 2023 MRS Postdoctoral Award Recipient

# Publication

MRS is pleased to present the inaugural MRS Bulletin Postdoctoral Publication Prize!

The MRS Bulletin Postdoctoral Publication Prize recognizes postdoctoral researchers for their intellectual merit and the impact of their research and scholarship. Candidates should have an interest in scientific publications and/or science writing and communications, and show promise for future scientific contributions in the broad materials field.

MRS Bulletin acknowledges the Jiang Family Foundation and MTI Corporation for their generous contribution to support this award.

mrs.org/bulletin-prize

# Recipient

#### Andy Tay Kah Ping 2017

Stanford University

For his combination of outstanding academic credentials, scientific publications and science communication efforts

#### Hortense Le Ferrand 2018

of Nanyang Technological University

For her excellent academic credentials, high-quality scientific publications, science writing and science communications efforts, and potential for future scientific leadership in the materials field.

#### Ognjen Ilic 2019 University of Minnesota

For his outstanding academic achievements. high quality of scientific publications, demonstrated passion for science communication, science outreach efforts to the general public, and clear potential to become a leader in the field of materials research.

#### Ritu Raman 2020

Massachusetts Institute of Technology

For her diverse research experience, outstanding academic achievements, high quality of scientific publications, extensive outreach efforts, and dedication to mentorship and professional service.

#### Tedrick Thomas Salim Lew 2021

Institute of Materials Research and Engineering in Singapore

For his excellent academic achievements, passion for his chosen area of research, interest in communicating his research and science to nonscientists, and significant leadership potential in the field of multidisciplinary materials science.

#### Liang Feng 2022

Northwestern University

For his excellent academic achievements. passion for his chosen area of research. interest in communicating his research and science to nonscientists, and significant leadership potential in the field of multidisciplinary materials science

#### Monica Jung de Andrade 2017

The University of Texas at Dallas

For her eager willingness to assume multiple leadership roles, her work in engaging international students and postdocs, and her numerous activities with The University of Texas at Dallas University Chapter. These contributions have impacted and engaged multiple communities within the Society including students, international members, under-represented members, industrial members and the MRS Membership at large.

#### Ashley White 2018

Lawrence Berkeley National Laboratory

For her work in cultivating sustainable development as a core MRS activity embodied by the Focus on Sustainability Subcommittee, and tireless advocacy through the Government Affairs Committee and the MRS Congressional Fellowship. White has written numerous articles for MRS Bulletin and Meeting Scene, and she continues to promote MRS values, namely interdisciplinarity and quality of life, through her extensive community efforts.

#### Terry Aselage 2019

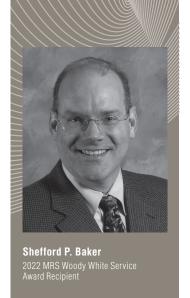

Sandia National Laboratories (retired)

For his focused leadership and vision at the helm of the Meetings Committee, moving the Society toward a more agile, responsive and inclusive community. Aselage also worked to create a stronger partnership between Meetings and Publications, driving the Society forward with more consistent, yet fresh approaches.

Eric Stach 2020

The Pennsylvania State University

For exemplary service to the MRS in our quest to improve the impact of our programs and to hold us accountable for professionalism aligned with our values.

#### Sanjay Mathur 2021

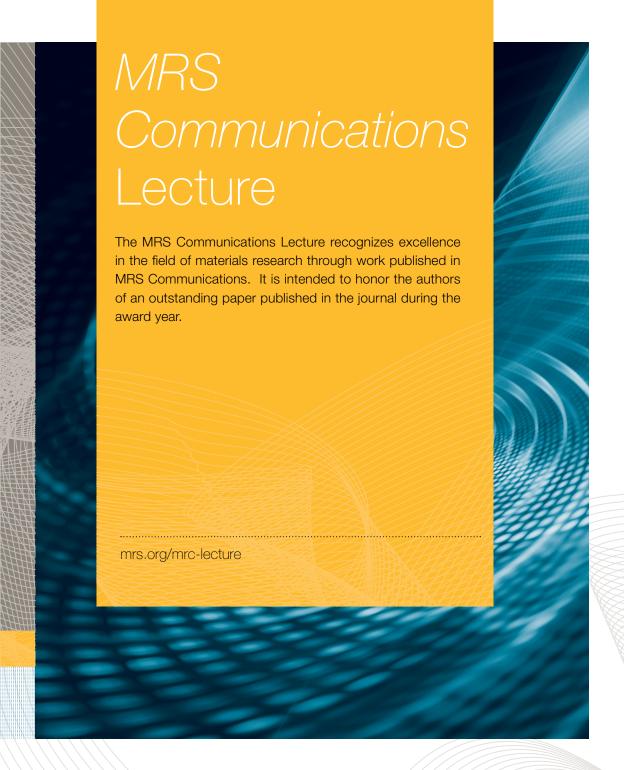

University of Cologne

For his passion and creativity in intensifying student engagement by creating microvolunteering opportunities for younger scientists and serving a global scientific community through extraordinary contributions for the advancement of materials research and innovation.

#### Shefford P. Baker 2022

Cornell University

For his long-term, impactful service to the Society and unwavering dedication to the betterment of the field and MRS.

# Graduate Student Awards MRS Gold and Silver Awards are intended to honor and encourage graduate students whose academic achievements and current materials research display a high level of excellence and distinction. MRS seeks to recognize students of exceptional ability showing promise for significant future achievement in materials research. Arthur Nowick Graduate Student Award This award honors the late Dr. Arthur Nowick and his lifelong commitment to teaching and mentoring students in materials science. The award will be presented to a GSA finalist who shows particular promise as a future teacher and mentor at each Meeting. MRS acknowledges the generous contribution for the Nowick Award to the MRS Foundation from Joan Nowick in memory of her husband Dr. Arthur Nowick. mrs.org/gsa
